Ultra-high power without tripping patent

The world's most advanced heated carpet cleaning machine

Maintain the most advanced technology in the industry

Manufacturing the high-quality products in the industry

Product description

S5800 heated carpet cleaning machine is the most advanced high temperature cleaning machine at home and abroad! At the same time, it is also the most advanced intelligent high-temperature cleaning machine among all the main machines of Fumeijing. Its characteristics: super power 8kw does not trip, cleaning carpets can spray continuous 90-100 ° C hot water under the condition of large water flow, special suction big.

The maximum power of the equipment is 8kw. This equipment is currently the most advanced high-temperature host in China. Its suction is larger than the world's largest 600MBAR (only one in the United States), reaching 700MBAR, and its large water volume can continuously produce 90-100 ° C hot water. ! It is also the only manufacturer in the industry that can achieve 8KW high power without tripping, and the first manufacturer at home and abroad to develop automatic foam elimination!

The product design is sturdy and durable, almost no after sales!

At present, the products are mainly sold in China, Australia, Saudi Arabia, Turkey and Europe!

S5800–Electric control introduction

Double system

The equipment controlled by the double leakage protector is the basis for ensuring 8KW high power. The 8KW power is divided into two 4kW power lines. The equipment is equipped with two power cords and plugged into two different rooms of the home, office building and hotel to use 8KW high power!

The maximum heater

Extra long 10-year lifespan
Almost no limescale after long-term use
The largest heating device at home and abroad

S5800–Electric control introduction

Microcomputer control double fan

The whole device is controlled by a durable microcomputer motherboard, whether it is from a small water volume to a large water volume of 50 kg, whether it is 0 suction to 700MBAR large suction can be adjusted through the computer motherboard

Intelligent adjustment to quickly troubleshoot

The knob on the left adjusts the suction power of the fan

The second knob on the left adjusts the flow of water and hot water

Touch screen facts show water pressure, temperature,

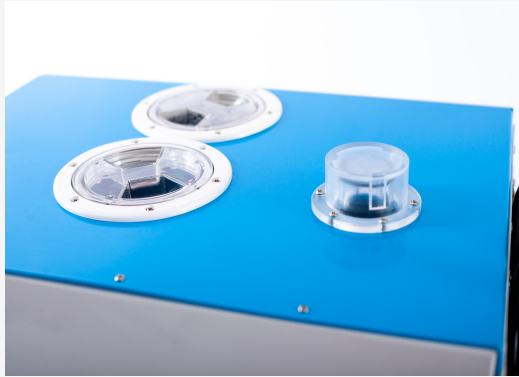

Temperature adjustable via touch screen 0-180°C

Right button: heating gear and fan control

S5800–Electric control introduction

FUMEIJING GROUP

Recovery Tank&Solution Tank

The equipment is equipped with 1 recovery tank and 1 clean water tank.
When you clean family sofas and small area carpets, you only need to pour water into the clean water tank to clean

Dual power cords

Matching two conventional triangle 10A plugs
Plug into two wall sockets controlled by different leakage protectors

S5800–Electric control introduction

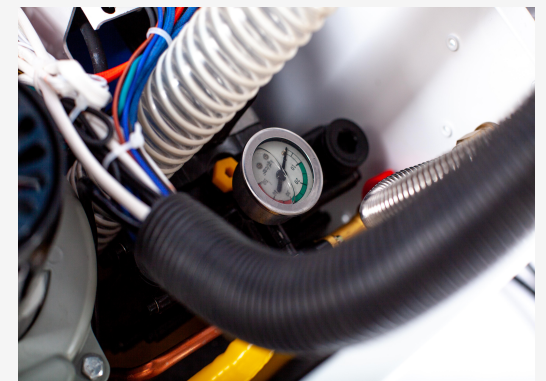

FUMEIJING GROUP

Automatic defoaming, automatic sewage discharge, automatic water intake

The equipment is equipped with automatic water intake, automatic sewage discharge and automatic elimination of foam! When you are tired of manually pouring the defoamer, the Fumeijing equipment can automatically eliminate the foam. When you clean the carpet and sofa in a large area, you can connect the water pipe and work uninterruptedly.

500PSI Pressure water pump

The long-life and durable high-pressure car wash pump can provide you with 0-50 kg of pressure for cleaning jobs from sofas to extra thick carpets

No brush but better than brush
cleaner

Bird's Nest is using fumeijing group carpet rotary extractor machine, Huawei carpet BYD carpet!

15 inch rotary carpet extractor

FUMEIJING GROUP

15Inch rotary carpet extractor

It is the most advanced carpet cleaning equipment in the world. So far, there is no equipment that can surpass the cleaning ability of a brushless machine, whether it is a large carpet raking machine, a single wiping machine, a swing brush machine or a rolling brush machine!

95% aluminum alloy material

Compared with the bulky single-wipe machine, the brushless rotary machine uses a large amount of aluminum alloy with higher cost, which makes the equipment operation more lightweight and convenient, and can be operated by both men and women.!

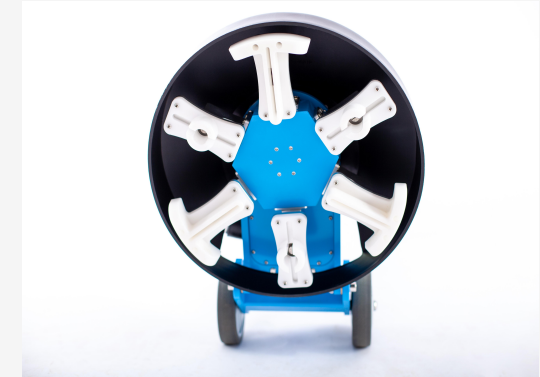

15 inch rotary carpet extractor

FUMEIJING GROUP

Hexagonal Disc Design

Three high temperature and high pressure nozzles, quickly spray 80-100°C hot water, and quickly recover in an instant!

More than 1000 cleaning strengths per minute, the matching motor has the appropriate cleaning strength, that's why the brushless machine can clean the carpet even if it is not clean, and protect the carpet everywhere

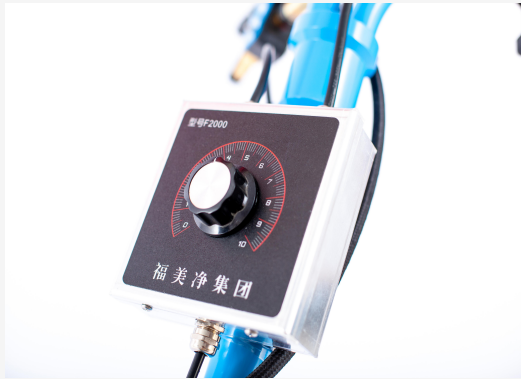

height adjustment

Adjustable according to human body design, can adjust the height button!

15 inch rotary carpet extractor

Speed regulation

Different carpets require different speeds, and the matching speed adjustment can realize cleaning operations from ultra-thin office carpets to carpets with a thickness of more than 10 mm

mute wheel

cleaning effect comparison

Rotary carpet extractor VS Brush machine

Compared with brush machine

Traditional cleaning:

1. Damage to the surface fibers of the carpet: The brush will damage the fibers on the surface of the carpet, especially wool carpets. Many hairs are lost due to the brush. Using the brush for many times will cause the carpet to have no elasticity and no softness! And There is no brush at the bottom of the brushless rotary machine, so there is no damage to the carpet!
2. Serious residue of cleaning agent: The traditional cleaning is to generate foam by a single wiper, and then use a vacuum cleaner to suck the foam away, so as to take away the stains. This kind of cleaning itself has great drawbacks, because the vacuum cleaner can only suck away the surface. However, it cannot take away the deep cleaning agent and stains, which will lead to the deposition layer of carpet cleaning agent for a long time, which will make the carpet harder and harder. Mildew, a strange smell, and yellowing of the carpet are all caused by the cleaning agent!

Rotary carpet extractor VS Brush machine

Compared with brush machine

3. Easy to get dirty: The traditional single-wiping machine + vacuum cleaner will cause easy to be dirty. This is caused by the time difference of cleaning the single-wiping machine. When the foam penetrates into the deep layer of the carpet with the single-wiping machine, the vacuum cleaner will be used to absorb it. Foam, the process vacuum cleaner and foam are not at the same time! Therefore, the vacuum cleaner can only absorb the foam on the surface. When it is dry, when people walk on it, the stains will quickly surface with friction. This kind of cleaning is suicide cleaning the carpet! The brushless rotary machine sprays out hot water, and it is quickly recovered, and the speed is 250/min, and the cleaning frequency has reached more than 1000 revolutions! So brushless machine-washed carpets are not only less dirty, but cleaner! This is the effect that ordinary equipment can't do!

4. Reduce carpet life: Many carpets are scrapped due to incorrect cleaning methods. By using brushless rotary machines, the life of hotel, office and family carpets can be increased by 5-15 years! It saves a lot of money because replacing the carpet is much more expensive than cleaning!

Rotary carpet extractor VS Carpet wand

Compared with carpet wand

Carpet Sweeping: Most carpet cleaning today still uses the old carpet sweeping method because it's been around for over 50 years. Using a carpet sweeper requires a lot of manual labor, and cleaning can only be done in two directions, often with mediocre results.

shortcoming:

1. Low cleaning efficiency: Carpet cleaning carpets can clean up to 200-300 square meters a day, and it is very tiring to do it all day, because it requires two hands to keep moving! The brushless machine can clean 800-1 000 square meters /day only by holding it
2. Low cleaning power: According to our test, it takes 3 seconds to clean a carpet with a length of 1 meter up and down, while a rotary carpet vacuum cleaner can clean dozens of times in 3 seconds.
3. Low water absorption: Generally, the carpet is cleaned up and down within a distance of 1 meter, and the water absorption is relatively low. In the same area, a rotary carpet vacuum can perform dozens or even hundreds of suction tasks!
4. Serious residues of cleaning agents: due to the low cleanliness of the large carpet, the carpet can only be cleaned simply, and the deep stains and cleaning agents on the carpet cannot be deeply cleaned, sometimes causing back dirty and cleaning chemical residues
